

WHO WE ARE

Strategic partners for your projects, generating trustful relations for our talent and contributing to a **sustainable business development**.

VALUE PACT

49 years of experience

High performance human talent

World class standards

Agility and effectiveness in our projects

7 mentions as strategic partners for our clients

+ 400 projects successfully executed

0 claims for non-compliance, fatalities, several accidents, occupational diseases

Sectors

Telecommunications

Industry

Oil & Gas

Construction

Manufacturing

Certifications

ISO 9001
Since 2002

ISO 45001

Since 2021
(Before OHSAS 18001 since 2010)

ISO 14001
Since 2010

Clients

At Ingecontrol we are aware of this changing world, therefore, **innovation** and **sustainable development** are very important in the **implementation of our projects**:

Engineering

- › Conceptual
- › Basic
- › Detail

Project Management

- › Technical supervision
- › Consulting
- › Expert support services

HSE

- › Expert support services
- › Training and education

Our business lines / Services

Renewable energy and environmental sustainability

- › With more than **13 years of experience** and **more than 100,000 m² installed**, we advise and help you with what you need to develop your **green infrastructure** project, guaranteeing sustainability and stability with **functional and efficient systems**
- › In our products we use **100% post-consumer plastic** and turn it into Green Infrastructure for Cities

HELECHO – Natural Cities: it's time for natural cities!

We offer nature-based solutions for sustainable construction, designed to mitigate the environmental impacts of uncontrolled and unplanned urban growth. These solutions highlight the importance of nature as a key ally in the quality of life and well-being of urban inhabitants

Wherever a Helecho project grows....

- › Biodiversity increases
- › Air pollution and heat-island effect are reduced
- › Water quality is protected by mitigating the risk of flooding
- › People's quality of life is improved

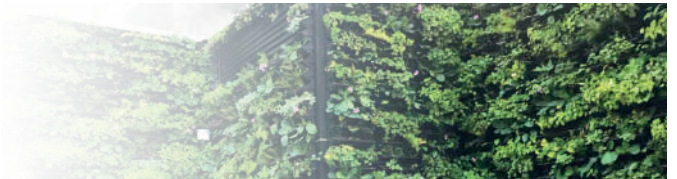

Our products function as **thermal insulation** for buildings, generate the opportunity to grow our own food and connect us with nature.

We increase **green infrastructure, protect water and create well-being** through artificial wetlands, urban parks, vertical gardens, sustainable urban drainage systems, green roofs, permeable floors, urban vegetable gardens, among others.

Some of our solutions

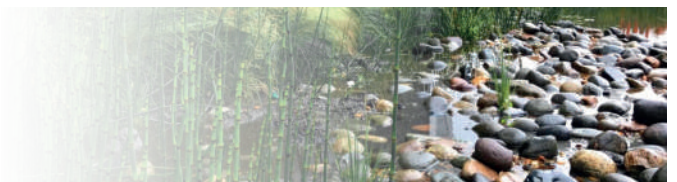

Vertical gardens with the Cangurü Module

Modular system for multiple uses such as **vertical gardens**, solutions for vertical agriculture, portable systems, green walls, living facades, vertical wetlands, urban vegetable gardens, hydroponics, water reuse, workshops and training, among others.

Permeable Floors with Multipurpose

Ecopavement Grating Sustainable Drainage Systems (SUDS) such as permeable floors are a great alternative to create permeable surfaces or urban drains that reduce the risk of flooding, filter water and contribute to the sustainability of your projects. They can be used in parking lots, pedestrian walkways, plazas, parks, etc.

Green Roofs

Design, supply and installation of **green roofs** or green roofs with extensive, intensive, ecological or urban agriculture systems. We use adequate drainage systems, with light and filtering substrates specially designed for each project and location. Green Roofs are a great tool for the **adaptability and resilience** of cities in the face of **climate change**.
